## Triphenyl phosphate is officially added to the SVHC list

On November 7, 2024, ECHA officially added triphenyl phosphate to the SVHC list. So far, the SVHC has increased from 241 to 242. The information of the substance is as follows:

Substance Name	EC No.	CAS No.	Reason	Possible use	Remarks
Triphenyl phosphate	204-112-2	115-86-6	Endocrine disrupting properties (Article 57(f) - environment)	Flame retardants and plasticizers	Consultation in January 2024

The substance was launched for public consultation in January 2024 and was originally scheduled to be identified as SVHC in June 2024. However, due to the discovery of a large amount of new information on the eve of the identification of the substance, the identification procedure of the substance was suspended. After several months, the substance was finally officially added to the SVHC list.

According to REACH, if SVHC is contained in article in a concentration that greater than 0.1% (w/w), downstream importers shall be notified with such information for communication and also provided with certifications. However, if SVHC is contained in article in a concentration that greater than 0.1% (w/w) and the volume for export is more than 1 tonne, notification of such information to ECHA is necessary. According to the WFD requirements, starting from January 5, 2021, if the SVHC content in an article is greater than 0.1%, the company needs to make a SCIP notification.

### HCT SOLUTION:

ECHA has already released some SVHC consultation and intended substances. HCT recommends that relevant companies initiate supply chain investigations on these substances in advance to ensure that the products are legal and compliant. HCT has a wide range of testing areas and convenient service channels to help companies evaluate the regulated special chemical substances in their products so that your products meet the standards of the corresponding countries and international organizations.
